

IN THE CLAIMS:

1. (Original) A hepatitis vaccine formulation comprising a bacteriophage particle the surface of which is unmodified and a pharmaceutically acceptable carrier therefor, the bacteriophage particle comprising an exogenous nucleic acid molecule encoding a hepatitis virus polypeptide which is capable of expression and presentation on the surface of an antigen presenting cell of an organism, such that an immune response to said polypeptide is raised in the organism.

2. (Original) The hepatitis vaccine according to Claim 1 for use in vaccinating against hepatitis types A, B, C, D, and/or E.

3. (Previously Presented) The hepatitis vaccine according to Claim 1 wherein the antigen expressed and presented on the surface of the antigen presenting cell is a hepatitis surface antigen.

4. (Previously Presented) The hepatitis vaccine according to Claim 2 wherein the bacteriophage has been engineered to express more than one hepatitis antigen.

5. (Original) A vaccine formulation comprising greater than 10^9 bacteriophage particles, the surface of each particle being unmodified, and a pharmaceutically acceptable carrier therefor, the bacteriophage particle comprising an exogenous nucleic acid molecule encoding a hepatitis virus polypeptide which is capable of expression and presentation on the surface of an antigen presenting cell of an organism, such that an immune response to said polypeptide is raised in the organism.

6. (Previously Presented) The vaccine formulation according to Claim 5 which is capable of eliciting a humoral and/or cellular immune response.

7. (Original) The vaccine formulation according to claim 5 for use in vaccinating against a virus, bacterium, fungus, yeast, protozoan, helminth, insect or transmissible spongiform encephalopathy.

8. (Original) The vaccine formulation according to claim 5 for use in eliciting an immune response against a cancer cell by means of the expression of a cancer cell specific antigen.

9. (Previously Presented) The vaccine formulation according to Claim 5 wherein the bacteriophage comprises transcriptional and/or translational regulators to facilitate expression of the polypeptide.

10. (Original) The vaccine formulation according to claim 9 comprising a eukaryotic promoter, such as the CMV, SV40, thymidine kinase or RSV promoter.

11. (Original) The vaccine formulation according to claim 9 which comprises the exogenous nucleic acid under control of a constitutive promoter and a controllable promoter.

12. (Previously Presented) The vaccine formulation according to Claim 9 wherein the bacteriophage is lambda (λ), p1 phage, T phage, Mu, fd, M13 or a filamentous phage.

13. (Previously Presented) The vaccine formulation according to Claim 9 wherein the bacteriophage is capable of expressing single or multiple copies of a polypeptide or a plurality of polypeptides.

14. (Previously Presented) The vaccine formulation according to Claim 9 wherein the bacteriophage is abortive to lytic growth in the natural bacterial flora of the chosen mammalian host.

15. (Previously Presented) The vaccine formulation according to Claim 9 further comprising inhibitors of lysosomal/endosomal enzymic catabolism and/or nuclear localisation signals.

16. (Previously Presented) The vaccine formulation according to Claim 9 further comprising an amount of the polypeptide to be expressed by the bacteriophage.

17. (Previously Presented) The vaccine formulation according to Claim 9 wherein the bacteriophage has been modified to express the polypeptide on the surface of the phage particle.

18. (Previously Presented) The vaccine formulation according to Claim 9 wherein the exogenous nucleic acid also encodes a polypeptide capable of augmenting the immune response.

19. (Previously Presented) The vaccine formulation according to Claim 9 further comprising an adjuvant.

20. (Previously Presented) The vaccine formulation according to Claim 9 wherein the bacteriophage is associated with a vehicle.

International Filing Date: October 2, 2003

21. (Previously Presented) The vaccine formulation according to Claim 9
for use in the prophylaxis and/or treatment of a disease in a human or animal.

22. (Cancelled)
